# Simplifying everyday life

## This is Infracontrol

Infracontrol is an independent system integrator specializing in projects relating to the infrastructure. For more than 16 years, we have teamed with our customers to create an Intelligent Infrastructure™ that simplifies everyday life and helps make their communities function better.

Our customers include the Swedish Road Administration, the Swedish Board of Civil Aviation, the Swedish cities of Göteborg, Stockholm and Malmö, and the Norwegian public transport provider Oslo Sporveier.

The company has annual revenues of approximately SEK 40 million, employs 25 people and has offices in Göteborg, Stockholm and Oslo.

## Our mission

Our aim is to make the community function better by providing more user-friendly IT solutions. With our special focus on usability, we make sure that technology is used to help people instead of the other way around, as is so often the case.

This results in user-friendly support systems that lead to improved safety, reduced energy consumption, better working environments and better return on investments.

# Intelligent Infrastructure™

## Our future

*- Everyone want's to have a smooth everyday life. This is why we have all these technical tools like cars, mobile phones and computers, isn't it? But very often you feel like all the "smart" solutions makes your life more complicated than they make it easier. We make a change. We get the technical systems to help the human being, instead of the other way around. Everything can be much more easy in the future. Go there with us!*

Johan Höglund, CEO

simplifying everyday life

# Just relax

Our specialists are here to help you

With our long experience and with our natural working method, **Infracontrol Usability Model**, we help you to create simple and natural solutions that simplifies everyday life.

We offer all the help you need to get a useful solution in place, based on our platform **Infracontrol Online**. We will take you from a complex jungle of technical systems to an easy road where you have a good overview and everything under control.

We always see everything from the users point of view. At the bottom line, the only thing that counts is to get a working cooperation between the human being and the technical systems. That's why we have developed our own working method.

**Infracontrol Usability Model**™ integrates the users knowledge and experience in the working process and in the functions developed. This is a good way to secure the investment of support system since you get the users "on the train" from the beginning.
